

EVMS Test Metric Specification

1. Guideline No: 10	2. Unique Test Metric ID: 10A202a	3. Test Type: Manual	4. RESERVED
5. Attribute: 10A2: Other work package planning requirements include: • Material is segregated from other elements of cost, planned in support of the need dates for the material items, and time-phased by dollar amount suitable for the type of material category. • Establishment of EVTs for material are consistent with the manner in which material is planned. • Subcontract effort is identified (as applicable) and time-phased consistent with subcontractor baseline plans.			
6. Test Step: Is material segregated from other non-material direct elements of cost within work packages?			
7. Test Metric: X = Count of incomplete material WPs that contain a second non-material direct element of cost.			8. Metric Threshold: X = 0
9. UN/CEFACT Required DEI(s)			
10. Data Elements Required: 13 EV Cost Tool Data 13H BAC 13Q BCWP _{CUM} 13AJ Element of Cost 13AK Element of Cost (Material)			
11. Assumptions: 1. If BAC and BCWP _{CUM} are within \$100 (or 1 hour), then the WP is considered complete.			
12. Instructions: 1. Review the EV cost tool data for incomplete WPs that identify material as the element of cost. 2. For these material WPs, count the WPs that also contain a second non-material direct element of cost; this count is the test metric (X).			
13. Numerator Code			
14. Denominator Code			

15. Configuration Summary

<i>Rev Number</i>	<i>Description of Change</i>	<i>Sections Affected</i>	<i>Metric Date</i>	<i>Spec Sheet Date</i>
v1.0	Initial Budget CCB	All		1/16/2016
v2.0	CCB - validated			5/17/2016
v2.1	Integration – updated data elements			9/13/2016
v3.0	No changes – updated to 3.0			3/23/2017
v3.1	Removed Block 4 (Frequency)			12/19/2018
v3.3	No changes – updated to v3.3			5/24/2019
v3.4	Update Attribute			8/31/2019
v3.5	Update: Test Step, Test Metric, and Instructions			2/22/2020
